EDUCATION

St. Thomas' College of Engineering & Technology (MAKAUT)

Bachelor of Technology in Computer Science and Engineering (CSE)

Kolkata, India

Expected Graduation: 2028

TECHNICAL SKILLS

- **Languages:** Java (Advanced DSA), Python, SQL, C, JavaScript
- **Backend Frameworks:** Spring Boot, Spring MVC, Spring Data JPA, Spring Security (JWT), Spring AI
- **Spring Internals:** Bean Lifecycle & Scopes, Dependency Injection, ApplicationContext, Hibernate Caching Strategies, JPA Query Optimization
- **Frontend & Web:** React.js, HTML5, CSS3, Tailwind CSS
- **Databases & Vector Stores:** PostgreSQL, pgvector, Pinecone (Vector Databases for AI/RAG)
- **Cloud & DevOps:** AWS (EC2, S3 - working knowledge), CI/CD Pipelines (GitHub Actions), Docker, Cloud-Native Application Design
- **Architecture & Tools:** RESTful APIs, REST Controllers, Microservices Architecture, System Design, Redis, Kafka, Git, Postman
- **Core CS Fundamentals:** Operating Systems, DBMS (Normalization, ACID, Transactions), Computer Networks, Object-Oriented Programming (OOPs)

WORK EXPERIENCE

Zetheta Algorithms Private Limited | **Software Engineer (Project Externship/Internship)**

Aug 2026

- Successfully completed the **Software Engineer HTTP** project, fulfilling core engineering deliverables across a 15-day development cycle.
- Architected a distributed transaction processing pipeline using **Java, Spring Boot, and Apache Kafka**, scaling throughput to **12,000+ TPS** with **sub-35ms P95 latency**.
- Implemented **CockroachDB Optimistic Concurrency Control (OCC)** and **Redis distributed locks** to prevent double-charges and database deadlocks.

ENTERPRISE & TECHNICAL PROJECTS

FinTrack: AI-Powered Financial Management Platform

Spring Boot, React, PostgreSQL, Spring AI, JWT, pgvector

- Architected a full-stack, cloud-ready financial application handling secure authentication via **Spring Security** and stateless **JWT tokens**.
- Designed a normalized **PostgreSQL** schema via **Spring Data JPA & Hibernate**, applying caching strategies and query optimization to guarantee strict **ACID** transactional integrity for financial ledgers.
- Engineered a production-style AI-driven financial insights chatbot using **Spring AI** and **pgvector** to implement a **RAG pipeline** for semantic expense categorization; explored **Pinecone** as an alternative vector database for scalable similarity search.
- Implemented **Redis caching** for frequently accessed dashboards, reducing database query overhead and improving latency across microservices.
- Built a responsive, component-driven frontend using **React** and **Tailwind CSS** to visualize financial trends and consume REST APIs.

Real-Time Attendance Tracker

JavaScript, REST APIs, Backend Architecture

- Developed a backend system to manage, track, and log user attendance records efficiently with high reliability.
- Designed and implemented RESTful API endpoints with structured input validation for dynamic data insertion and retrieval.

ACHIEVEMENTS & PROBLEM SOLVING

- **Data Structures & Algorithms:** Actively solving algorithmic challenges with focus on Multi-Dimensional DP, Greedy Algorithms, Complex Graphs (BFS/DFS, Dijkstra), Segment Trees, and Trees at the LeetCode Medium-Hard level.
- **Technical Aptitude:** Demonstrated top percentile performance in quantitative and logical reasoning assessments for premium software engineering tracks.
- **Hackathon Competitor:** Built a Cultural Heritage Preservation App at *CodeFlow* (36-hr hackathon during SREY 2K25, St. Thomas' College of Engineering & Technology) among 32 teams to index and browse cultural artifacts.
